FUNDED BY:

Overview & Impact

4 Co-Lead Universities 4 partner institutions	Built on 20 years of research in Data Analytics and AI
450+ Academics, Postdocs, PhDs, RAs	2000+ Scientific conference and journal papers
121+ Funded collaborations with industry partners	300+ Research Awards
12 Spin out companies 72 license agreements	60+ H2020 consortia, 580+ collabs., 40 countries
1,137+ school visits, 28,000 students	250 PhDs graduated,

Overview & Impact

€593m to the Irish economy

€1.46 : €1 in additional investment

14 conferences, 2000+ delegates, €3.2m

641 alumni, 26%+ went to industry

12% of licenses of all HEIs

4

Co-Lead Universities
4 partner institutions

Built on **20** years of
research in Data Analytics
and AI

450+

Academics, Postdocs, PhDs,
RAs

2000+

Scientific conference and
journal papers

121+

Funded collaborations with
industry partners

300+

Research Awards

12

Spin out companies
72 license agreements

86+

H2020 consortia, 580+
collabs., 40 countries

1,137+ school visits,
28,000 students

250
PhDs graduated,

Behaviour
Measurement and
Change

- ✓ Investigators form clusters around specific application domains
- ✓ Drives cross site collaborations
- ✓ Helps with PhD / Post Doc recruitment
- ✓ Great PI/FI engagement and vibrant groups

Behavior Measurement & Change - the interface between data science and health and performance

Key Objective : Work with experts in health and sports science to address challenges in measurement, understanding and influencing behaviour and performance in health and sport.

- We would like to further our development of:
 - Strategies for objective, reliable and sensitive **measurement** and understanding of macro and micro level behaviours in health and sports performance contexts.
 - Data **visualisation** tools that effectively communicate insights to different stakeholders and
 - Personalised and adaptive **recommendations** for behaviour change and performance enhancement.

Through 3 interdisciplinary projects:

Optimising athlete performance in running.

Measurement and management of chronic pain

Enhancing lifestyle management and learning behaviours in students.

Medical Imaging - collaborative research between Insight and clinical experts.

Key Objective : to develop novel deep learning approaches for a variety of medical applications.

- Better deep learning models for medical image analysis.
- Apply to clinical tasks, and use interpretability and explainability to assist the clinician's workflow.
- Interest in state-of-the-art segmentation models for medical image analysis, applied to different modalities (MRI, CT, Xray, etc).
- Data augmentation- methods, GAN for image generation and enhanced model training.
- Joint learning, combining image data with medical reports.
- Time series analysis, LSTM's.
